

Employer: Goshe Energy Storage LLC

Job Location: 1920 13th Street, Ste B4, Boulder CO 80302

Job Title: Manager

Job Duties:

Support all activities related to the full lifecycle of each energy storage project including new project acquisition, Site prospecting and development, Energy market evaluation, Battery optimization and configuration, Utility-scale infrastructure construction, Ancillary service and other energy market commodity trading and analysis, and Project financing to support construction and operations, including tax credit sales and debt. Further responsibilities include:

- Review and evaluate energy storage systems' (ESS) operations by building, maintaining, and improving advanced financial models; creating estimates; and projecting returns of new and current investments.
- Perform due diligence on ESS assets by interpreting technical and financial reports for asset capability, technology, operating expenses, and net returns to facilitate investment decisions.
- Evaluate engineering and construction designs in collaboration with external consultants and monitor progress of existing assets against budgeted costs.
- Build and maintain macro views on the development of energy markets incorporating the impact of natural gas, renewables, and ESS assisting in developing investment strategies.
- Craft crisp analytical conclusions and communicate them effectively to team members, counterparties, and investors,
- Create data-driven marketing materials for financing parties to demonstrate the value of Goshe's solutions,
- Manage external consultants and advisors during financing and M&A processes,
- Prepare investment memoranda and presentations for team members,
- Collaborate across the team to generate ideas, analyses, and research to solve problems,
- Develop and maintain relations within the energy market and management teams, and
- Continually build Goshe's knowledge-base and capabilities within the industry by monitoring customers, industries, and regulators for news that may impact portfolio and business needs.

Requirements:

Requires Bachelor's degree in petroleum, oil & gas, or renewable energy engineering; mining; or an energy or commodity related field and 4 years experience as an energy financial specialist, in petroleum engineering, or related financial occupation in a commodity-driven field.

***Specific skills and other requirements:**

Must have 4 years of experience in:

- Energy market, energy development, and/or energy storage financial analysis,
- Building financial models for energy generation projects or trading strategies,
- Communicating the outputs of quantitative analysis in a cogent manner to drive decisions,
- Managing external consultants and advisors during financing and M&A processes, and
- Energy commodity trading or energy project finance.

Must have 2 years of demonstrated expertise in energy transition and infrastructure development.

May have travel 10% within the US to project sites, conferences, or funder offices

Hybrid work may be permitted (3/2)

Salary: \$194,917 - \$200,000/year
